

SYSTEM FOR PRESERVING A LIQUID SUBSTANCE IN A FLEXIBLE  
CONTAINER

5

## A B S T R A C T

10 The invention provides a system for conserving a  
liquid substance (L) in a flexible receptacle (1), said  
substance being liable to be degraded and/or contaminated  
on contact with ambient air, the system being  
characterized in that it comprises a solid insert (3)  
whose outer envelope substantially matches the inside  
shape of the receptacle (1) in which the insert is  
15 immersed at least in part, said insert providing  
protective treatment by making contact with said  
substance (L) over a large interchange area.
